

A

PG1.1 Eval Notes - Sept 2025
- PD2 GPIO LED Toggle works.
- Serial1 TX to computer RX is working. Some issues the other way
- ADC is working. Code example available.
- Serial is working. Pain the arse to get working.

B

First - install the CH32 library the usual way.
Second - download the master from github, and overwrite.
- Stored in username/AppData/Local/Arduino15/packages/WCH/Hardware/ch32v/1.0.4 etc
Third - Download 4 files and overwrite them from a Pull Request:
https://github.com/openwch/arduino_core_ch32/pull/201

C

PG4.0
006 is now plan of record
Neopixels only supported when external 5V is applied.
Keepalive should apply to USB input.
Powerpath should be
5V -> Schottky -> ~midrail -> TP405x charge and LDO
Battery -> MOSFET -> ~midrail
USB is now USB-C

D

Labels Needed

3V3
5V
SWIO
QWIIC
PA1
PC3
GND
EXTPWR
G
VBAT+

Evaluation Notes of PG1.0 (6/3/2024)
- THERES A SHORT UNDERC5 (output cap to boost) - fixed in schem and layout
- Feedback resistors are wrong, because reference voltage of the output divider is 0.6,
not 0.78 as usual. - fixed on schem.
PRogrammer WORKS in Arduiino! WOOHHH000
A3 works for analog input (PIN_A3 in code PD3)

DONE:
Additional A0 Input Connector Added
QWIIC Connectors Added
NPX Circuit added in parallel to LEDOUT
